

CITYWIDE SUSTAINABILITY VISION STATEMENT

The General Plan and Community Area Plans will incorporate a sustainable vision for the city...

A sustainable city is one which succeeds in balancing economic, environmental and socio-cultural progress through processes of active citizen participation. It is the scale of the city/region that is the most efficient scale capable of addressing the many community design, environmental, social, economic, political and other imbalances besetting today's challenges, and simultaneously the smallest scale at which such problems can be resolved in an integrated scale and fashion.

Sustainability is a condition of living which enables the present generation to enjoy social wellbeing, a vibrant economy, and a healthy environment, without compromising the ability of future generations to enjoy the same.

The Planned Unit Development district will establish these sustainability goals...

- Green Buildings
- Responsible Energy Use
- Public Realm
- Visualizing Density
- Diversity of Housing
- People Oriented Scale
- Mixed-use Development
- Neighborhood Compatibility
